

IN THE ABSTRACT:

Please amend the abstract as follows. A clean revised copy is enclosed on a separate sheet.

ABSTRACT

The invention refers to a A device for supply of a gas to a volume (V). The device includes a supply conduit (1), which is connectable to a gas source (2) and which includes an outlet end, and a porous body (3), which is provided at said the outlet end. The device is arranged to permit said the supply of the gas through the porous body (3). The device includes an attachment member (15) which includes a surface and a channel extending through the surface. The porous body is attached to said the surface and the outlet end is connected to the attachment member in order to permit said the supply via said the channel.
